

Capture, Package, preserve legacy and modern Windows apps

WHEN TO USE

- Windows 10 to 11 Migrations
- No installer, extract full install set and auto-manifest
- Gated installers
- Move from ageing hardware to modern devices
- Document apps
- APPV to MSIX

KEY CAPABILITIES

- Three capture methods, Shortcut capture, Installer Monitoring, App-V extraction
- Deep capture, Files, Registry, AppData, Services
- Dependency lookup and automatic compatibility fix-ups
- Outputs, Folder package (portable, recommended for x64 and XP), MSI package (x86 only), optional MSIX via separate CLI
- Automation, GUI and CLI, plus PowerShell module

HOW IT WORKS

SYSTEM AND REQUIREMENTS

- Build MSI on Windows 10 or 11, WiX 3.11 auto-installed, admin rights and internet required, MSI supports 32-bit apps only, use Folder for x64
- Best practice, use a clean VM, take a snapshot, disable real-time AV during capture, test on a clean target

BUSINESS VALUE

- Up to 90% fewer packaging hours
- Fewer unknowns during migration
- 25 to 40 percent fewer device-related support calls on Windows 11 hardware
- Save up to 40 percent of IT budget, scenario dependent
